

PicoSure

Before treatment:

No sun exposure 4 weeks prior to treatment..Sun exposure decreases the effectiveness of the laser treatment and can increase the chance of posttreatment complications. Also, please avoid any retinoids, like tretinoin or adapalene a couple 3-5 days before the treatment.

PicoSure for rejuvenation, acne scars, and discoloration:

- It is common for the skin to appear pink for only 1-3 hours with minor swelling. After treatment it is important to wear sunscreen to the affected areas for a few days after treatment.
- The skin will appear tighter and smoother after just one treatment. Dark spots will lighten within 7 to 14 days. Collagen and elastin production takes at 1 to 3 months to be seen.

PicoSure for tattoo removal:

- It is common for your tattoo to briefly turn a whitish color and then swell or turn red, but this only lasts from a few hours up to a day post treatment. In some cases, mild blistering will appear at the treatment site for a few days.
- Tattoo treatment areas should be covered with aquaphor for 5-7 days.
- Avoid exposure to the sun for a week after treatment to prevent hyperpigmentation (darkening).
